(54) Title: PHOSPHORIC ACID SALT OF 5-[[4-[2-(5-ETHYL-2-PYRIDINYL) ETHOXY] PHENYL] METHYL]-2, 4-THIAZO-
LIDINEDIONE

(57) Abstract: Phosphoric acid salt of 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]- 2,4- thiazolidinedione is novel and
exhibits, blood sugar-lowering activity in mammals and is of value as a prophylactic and/or therapeutic agent for prevention and/or
treatment of diabetes.

WO 2005/021543 A1

5 **TITLE OF THE INVENTION**

PHOSPHORIC ACID SALT OF 5-[[4-[2-(5-ETHYL-2-PYRIDINYL) ETHOXY] PHENYL] METHYL]- 2,4-THIAZOLIDINEDIONE

FIELD OF THE INVENTION

10 The present invention relates to a novel compound and to a novel process for preparing the compound, to a pharmaceutical composition containing the compound and to the prophylactic and/or therapeutic use of the compound and composition.

BACKGROUND OF THE INVENTION

15 US 4,687,777 discloses 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]- 2,4- thiazolidinedione. The compound exhibits blood-glucose and blood-lipid lowering action with lower toxicity, and may be safely administered, orally or parenterally, as it is or advantageously as a pharmaceutical composition comprising an effective amount of the compound or its pharmacologically acceptable salt and a pharmacologically acceptable carrier, excipient or diluent therefor, in the form of powder, granule, tablet, hard capsule, soft capsule, dry syrup, suppository, injection or the like.

25 Hydrochloric acid salt of 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]- 2,4- thiazolidinedione is currently marketed for treatment of Type II diabetes.

The present invention discloses a novel salt of 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]- 2,4- thiazolidinedione
30 namely phosphoric acid salt of 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]- 2,4- thiazolidinedione which is useful in

- 5 the treatment of Type II diabetes. This compound shows good water solubility and good stability in solid form. Also this compound is significantly more soluble than the free base as well as the currently marketed HCl salt of 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]- 2,4- thiazolidinedione.

10 **SUMMARY OF THE INVENTION**

- The present invention relates to a novel compound, phosphoric acid salt of 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]- 2,4- thiazolidinedione (FORMULA I), to a novel process for preparing the compound, to a pharmaceutical
15 composition containing the compound and to the prophylactic and/or therapeutic use of the compound and composition.

FORMULA I

- 20 The present invention provides a compound of formula I or a tautomeric form thereof, for use in the treatment of and/or prophylaxis of hyperglycemia.

- The surprising and advantageous stability and water solubility of this compound provides for significant formulation and bulk
25 handling advantages.

DETAILED DESCRIPTION OF THE INVENTION

5 Accordingly, the present invention provides a novel compound of formula I

FORMULA I

10 or a tautomer thereof.

The compound of formula I is a phosphoric acid salt of 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]-2,4-thiazolidinedione.

As stated the compound of the invention is significantly more
15 soluble in water than the corresponding free base or currently marketed HCl salt. A convenient method for determining the stability of the compounds of the invention in aqueous solution involves determining the degree of precipitation of the parent free base from an aqueous solution of the test compound at known
20 conditions of temperature and over known periods of time. We have found that the compound of formula I show good stability in aqueous conditions.

The currently marketed HCl salt of 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]-2,4-thiazolidinedione is
25 practically insoluble in water (The Merck Index Online, 2003). The compound of present invention is freely soluble in water. This has significant pharmacokinetic advantage.

5 The quantitative analysis of the test may be carried out using conventional methods e.g. HPLC.

 As mentioned above the compound of the invention is indicated as having useful therapeutic properties.

 The present invention accordingly provides a compound of
10 formula I, and/or a tautomeric form, for use as an active therapeutic substance.

 Thus the present invention provides a compound of formula I, or a tautomeric form thereof, for use in the treatment of and/or prophylaxis of hyperglycemia.

15 Accordingly, the present invention also provides a pharmaceutical composition comprising a compound of formula I, or a tautomeric form thereof, and a pharmaceutically acceptable carrier therefor.

 Usually the pharmaceutical compositions of the present
20 invention will be adapted for oral administration, although compositions for administration by other routes, such as by injection and percutaneous absorption are also envisaged.

 Particularly suitable compositions for oral administration are unit dosage forms such as tablets and capsules. Other fixed unit
25 dosage forms, such as powders presented in sachets, may also be used.

 The present invention further provides a method for the treatment and/or prophylaxis of hyperglycemia in a human or non-human mammal, which comprises administering an effective, non-
30 toxic, amount of a compound of formula I, or a tautomeric form

5 thereof, to a hyperglycemic human or non-human mammal in need thereof.

The reaction between the compound of formula I and the source of phosphoric acid counter-ion is generally carried out under conventional salt forming conditions, for example by admixing the
10 compound of formula I and the source of counter-ion, phosphoric acid, suitably in approximately equimolar amounts but preferably using an excess of the source of counter-ion, phosphoric acid, in a solvent, generally a C1-4 alkanolic solvent such as methanol, ethanol, or other aprotic solvents like acetonitrile, at any
15 temperature which provides a suitable rate of formation of the required product, generally at an elevated temperature and thereafter isolating the product.

The following Example illustrates the invention but does not limit it in any way.

20 **EXAMPLES**

Example 1

PHOSPHORIC ACID SALT OF 5-[[4-[2-(5-ETHYL-2-PYRIDINYL) ETHOXY] PHENYL] METHYL]- 2,4-THIAZOLIDINEDIONE

25 A suspension of 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]- 2,4- thiazolidinedione base (5 g, 0.014 mol) in methanol (50 ml) was heated to 50-60°C and phosphoric acid (85%, 11.3 ml) was added. After stirring for 30 minutes at the same temperature, the reaction mixture was concentrated to about 10 ml and chilled
30 to afford title compound.

Example 2

5 **PHOSPHORIC ACID SALT OF 5-[[4-[2-(5-ETHYL-2-PYRIDINYL) ETHOXY] PHENYL] METHYL]- 2,4-THIAZOLIDINEDIONE**

 A suspension of 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]- 2,4- thiazolidinedione base (100 g, 0.28 mol) in
10 acetonitrile (500 ml) was heated to 50-60°C and phosphoric acid (85%, 150 ml) was added. After stirring for one hour at the same temperature, the reaction mixture was concentrated to about 250 ml and chilled to afford title compound.

Example 3

15 **PHOSPHORIC ACID SALT OF 5-[[4-[2-(5-ETHYL-2-PYRIDINYL) ETHOXY] PHENYL] METHYL]- 2,4-THIAZOLIDINEDIONE**

 A suspension of 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]- 2,4- thiazolidinedione base (100 g, 0.28 mol) in isopropyl
20 alcohol (750 ml) was heated to 50-60°C and phosphoric acid (85%, 150 ml) was added. After stirring for one hour at the same temperature, the reaction mixture was concentrated to about 250 ml and chilled to afford title compound.

5 we claim

1. A compound of formula I

FORMULA I

or tautomeric form thereof.

- 10 2. A compound according to claim 1, which is phosphoric acid salt of 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]-2,4- thiazolidinedione.
3. A process for the preparation of compound I of claim 1, comprising
- 15 contacting the 5-[[4-[2-(5-ethyl-2-pyridinyl) ethoxy] phenyl] methyl]- 2,4- thiazolidinedione free base with phosphoric acid.
4. A process as in claim 3, wherein the reaction is carried out in a solvent selected from water miscible solvent or water
- 20 immiscible solvent.
5. A process as in claim 4, wherein the solvent is water miscible.
6. A process as in claim 5, wherein the solvent is a linear or branched alkanol or acetonitrile.
7. A process as in claim 6, wherein the alkanol is selected from
- 25 methanol, ethanol or isopropyl alcohol.
8. A process as in claim 3, wherein the reaction is carried out at a temperature between 25-100°C.

- 5 9. A pharmaceutical composition comprising a prophylactically
and/or therapeutically effective amount of the compound of
claim 1.
- 10 10. A method of prevention and/or treatment of hyperglycemia
comprising administering effective amount of compound of
claim 1.
11. 11. Use of compound of claim 1 as ingredient in the manufacture
of medicament for use in the prevention and/or treatment of
hyperglycemia.
